(21)/25
Best.

Use case Title:

Check Account Balance on ATM

Pre-condition:

the user must have an ATM card and know the PIN. *Logged in.*

Basic path:

Step 1:

<user insert the ATM card into the machine>

Step 2:

system prompts the user to enter the PIN.

Step 3:

user enters the PIN.

Step 4:

system verifies the PIN and displays the menu.

Step 5:

user selects the check balance option.

Step 6:

system fetches the account balance and displays on the screen.

Step 7:

user chooses to end the session or perform another transaction.

post condition

The user's balance is displayed and the session ends securely.

Exception:

ATM is out of service or unable to connect to the bank server. *when?*

Alternative path:

If the PIN is incorrect, prompt the user to retry or exit.
